

PRESS RELEASE

15.04.2025 (Halstenbek / Hamburg)

AKKU SYS at ees / Intersolar: Technologies and Partnerships Driving the Energy Transition

AKKU SYS will once again be represented at this year's ees / Intersolar. As a value-added distributor with many years of experience in photovoltaics, battery, and energy system technology, the northern German company supports its business customers in the implementation of renewable energy projects – with expert consulting, technical know-how, and a broad product portfolio.

Together with its partners Midea, SAJ, and TCL, as well as its proprietary brand a-TroniX, AKKU SYS will showcase solutions for modern energy supply at the trade fair: hybrid inverters, storage systems, and energy management systems (EMS) will take center stage – along with discussions on integration and system openness.

"The energy transition can only succeed if systems are both compatible and economically viable. That's exactly what we're working on – with strong partners and practical solutions," says Managing Director Björn Nowosadtko. "For us, Intersolar is a place for dialogue – with customers, manufacturers, and all those interested."

In addition to technical expertise, AKKU SYS offers a wide product range and extensive project experience – from battery solutions of all sizes to cutting-edge PV systems. At the company's booth, industry professionals can discover product innovations and real-world application examples.

You'll find AKKU SYS and its partners in Hall B1, Booth 440.

About the Trade Fair

ees Europe, along with its parallel events Intersolar Europe, Power2Drive Europe, and EM-Power Europe, will take place from May 7 to 9, 2025, as part of *The smarter E Europe* – Europe's largest alliance of energy industry exhibitions – at Messe München.

About AKKU SYS

As a value-added distributor for energy solutions, AKKU SYS is actively driving the energy transition. From AA cells and solar systems to large-scale energy storage, the company provides tailored products and services for virtually any application and scale.

The corporate group has been operating for over 15 years, with multiple locations in Germany and across Europe. A key driver of its business model is the expansion of renewable energy. In 2024, AKKU SYS employs 210 people and benefits from a strong network of over 20,000 partners.
