## **AKKU SYS expands its heat pump range with TCL products**

AKKU SYS is adding another internationally established brand to its product range: With immediate effect, the wholesaler is distributing TCL air-to-water heat pumps, offering another powerful solution for energy-efficient heat supply in existing and new buildings. The versatile systems support heating, cooling and domestic hot water preparation and are characterised by high efficiency, intelligent control and particularly quiet operation.

"With TCL, we are expanding our range with a high-quality product that is particularly suitable for renovation projects and demanding comfort solutions," says Managing Director Björn Nowosadtko. "The combination of intelligent control, high flow temperature and broad applicability makes the TCL heat pump an ideal addition to our product range".

### **TCL heat pump at ees / Intersolar 2025**

Visitors to the AKKU SYS stand B1.440 at ees / Intersolar Europe 2025 will be able to experience the benefits of the TCL heat pump first hand. The system is part of the extended heat pump range. AKKU SYS staff will be on hand to provide expert advice and product information.

The TCL air-to-water heat pump uses the advanced natural refrigerant R290 and offers 3-zone temperature control, flow temperatures up to 80°C, quiet operation (35 dB(A) at 3m) and IoT-based remote monitoring. 36 climate curves and an efficient DC inverter system ensure a flexible, resource-saving application - also in combination with photovoltaics.

### **About TCL**

TCL is one of the world's leading manufacturers of home and air-conditioning technology. The company stands for technological innovation, reliability and sustainability. In the heat pump sector, TCL offers pioneering solutions characterised by intelligent control, energy efficiency and a high degree of adaptability.

### **About AKKU SYS**

As a value-added distributor of energy solutions, AKKU SYS actively supports the energy transition. From AA batteries and solar systems to commercial-scale energy storage, the

company provides suitable products and services for virtually every application and system size.

The AKKU SYS Group has been active for over 15 years and operates multiple branches in Germany and abroad. A key driver of its business model is the expansion of renewable energies. As of 2024, AKKU SYS employs 210 people and maintains a large professional network of over 20,000 partners.
